

1 SMART USE OF ENERGY

Did you know that heating and cooling account for about 48% of the energy use in a typical U.S. home, making it the largest energy expense? Have no fear, Renewal by Andersen® replacement windows will help you save money on your energy bills. We also have an extensive selection of window and patio door glass options that are ENERGY STAR® certified.

Installing ENERGY STAR® certified windows and doors can shrink energy bills—and carbon footprints—by an average of 12% nationwide compared to non-certified products! Energy efficient windows means you use less energy, which can help the planet and your pocketbook. It's a win-win!

Did you know?

Andersen Corporation, including Renewal by Andersen, was honored with a 2017 ENERGY STAR® Partner of the Year – Sustained Excellence Award, which is given to organizations who have consistently earned Partner of the Year for several years in a row!

2 SAFER INDOOR AIR QUALITY

The United States EPA ranks indoor air quality as a top five environmental risk to public health.¹ That's a scary thought! We're looking out for you and your family. Renewal by Andersen and its parent company, Andersen Corporation, were the first window companies to receive the SCS Global Service Indoor Advantage™ Gold certification—the strictest indoor air emission standard in the country. This certification guarantees that products contribute to a healthy and safe indoor environment.

3 SMART USE OF MATERIALS

Do you know what your windows are made of? **Materials matter.** Renewal by Andersen replacement windows are made with an exclusive Fibrex® composite material which contains 40% reclaimed wood fiber by weight. What's more, we reclaim much of our wood fiber from Andersen Corporation's wood window manufacturing facilities.

4 LONG PRODUCT LIFECYCLE

Construction waste is a major source of landfill waste in the United States. Every day, Renewal by Andersen replaces windows in homes that are less than 10 years old. Choosing products that are built to last is one of the most important ways to limit landfill waste. Our products have a long lifecycle, backed up by one of the strongest warranties you will ever find!

5 HOUSING

Making homes more energy efficient benefits property values, neighborhood livability, and keeps older homes relevant longer. Renewal by Andersen is refreshing the replacement window industry by bringing the latest energy and material technology to the existing housing stock from coast to coast. We've extended the life of over 500,000 homes by installing more than 4,000,000 energy efficient windows.
